Phone: (+84) 283 5171 080

## **A. Tech Requirement**

- ReactJS Application with Webpack, Redux or React Hook
- Template with Ant Design

## **B. Detail**

- Review the screenshot [here](#) and create the page below:

### **1.1 Employee List**

- List User in DUMMY DATA (Mock API or JSON file is fine)
- No need to implement ADD USER - just show the + icon like screenshot

### **1.2 Employee List -> Filter**

- Filter actions
  - o The dropdown list not hardcode options - must read from the DUMMY DATA and show options. (e.g: in DUMMY DATA have Department: Operation, CxO, Engineering; then the Department dropdown list will have 3 options like that; change the data in DUMMY DATA and the options will change too)
- Extra Actions:
  - o Select Columns: click to show / hide the checkbox column to select row(s)
  - o Download CSV / XLS: download current list / selected rows as CSV/XLS format
  - o Delete Users - show confirm dialog before delete, if okay then remove the selected row(s) - reload page can show all DUMMY DATA again

### **2.1 Employee Detail -> Inspections**

- Using DUMMY DATA (Mock API or JSON file is fine)

*Hope to see you at KYANON.*
